

PROBE READOUTS (26 implemented)

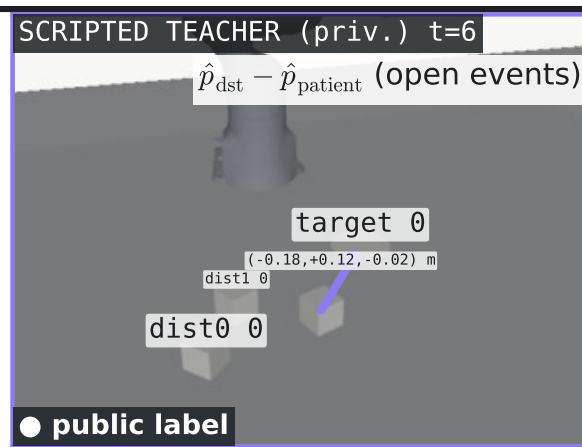

colour = what the readout encodes: cyan geometric, amber physical interaction, violet task / procedure

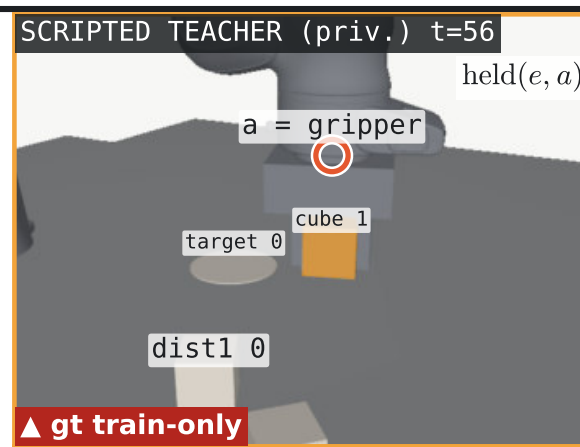

probe.arm.acting_on
hand touches entity?

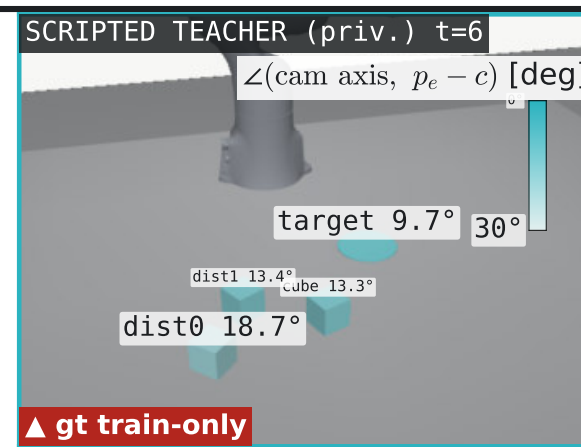

probe.arm.focused_on
entities of the active event

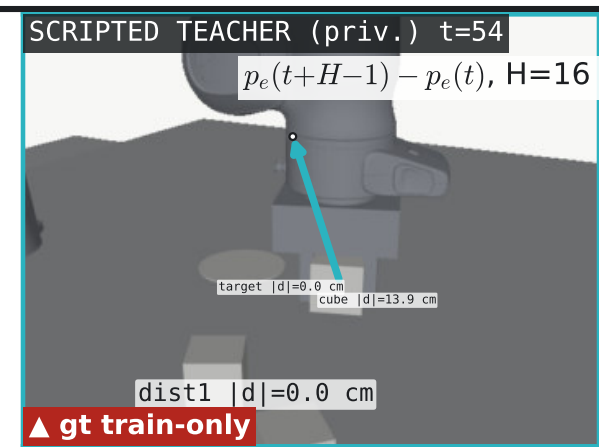

probe.arm.goal_effect
displacement the task asks

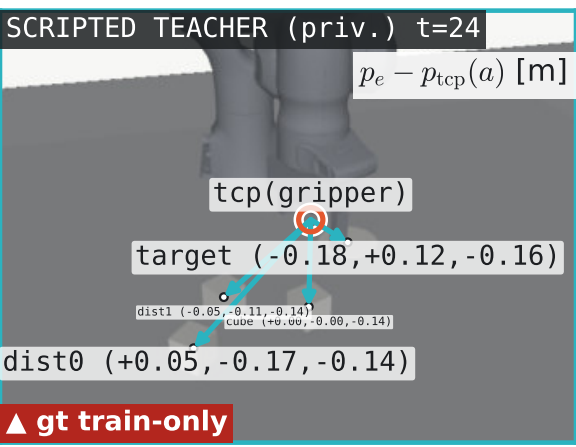

probe.arm.held_by
entity held by assembly?

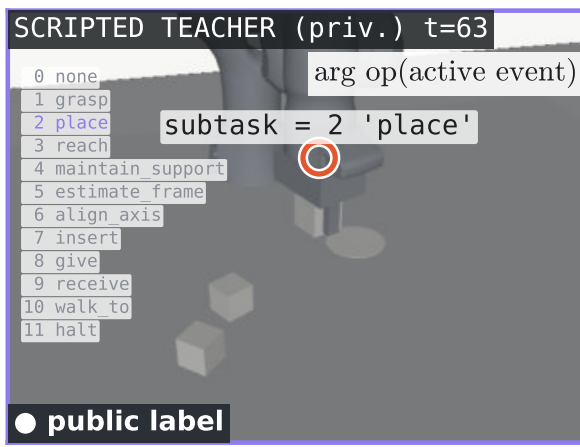

probe.arm.looking_at
angle off the camera axis

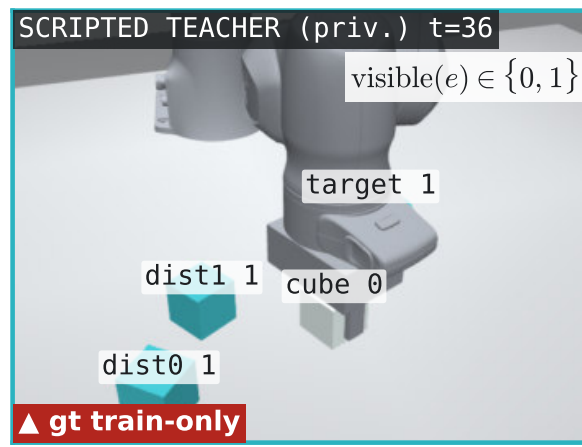

probe.arm.observed_effect
realized 16-tick displacement

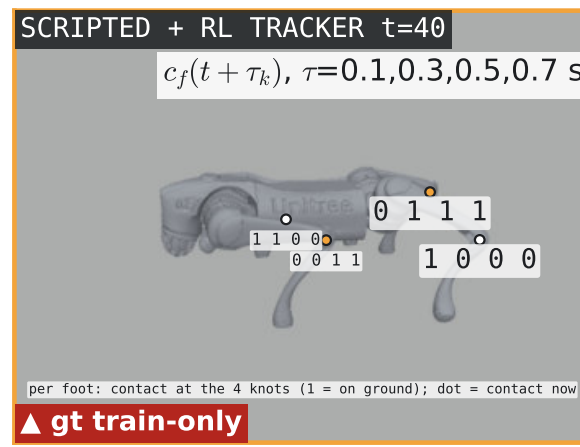

probe.arm.rel_pos
position relative to the TCP

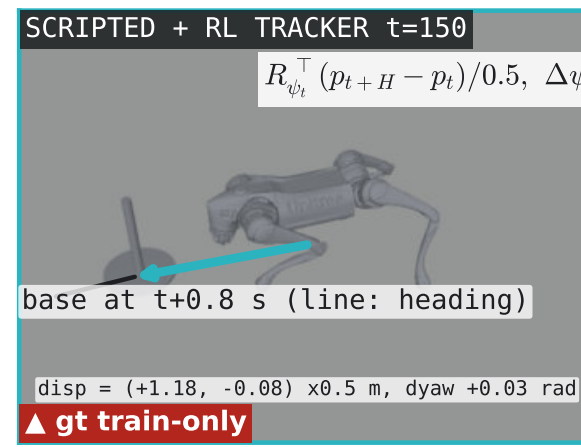

probe.arm.subtask
active task operator

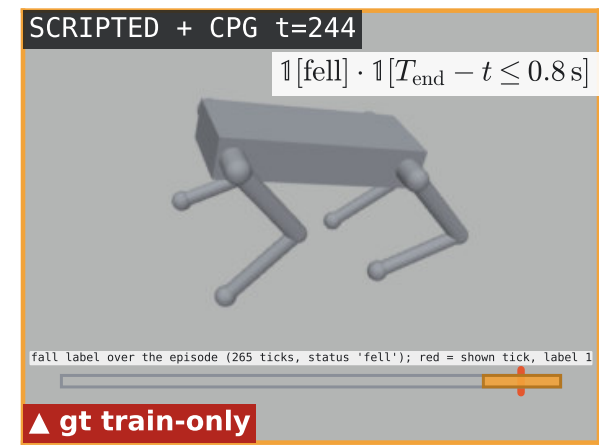

probe.arm.visible
visible in the front camera?

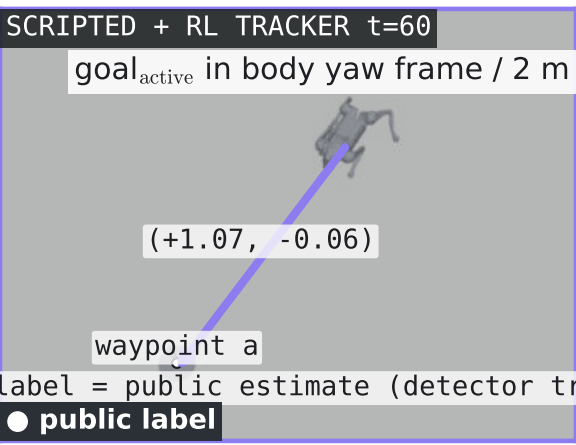

probe.legged.contact
foot contact at packet knots

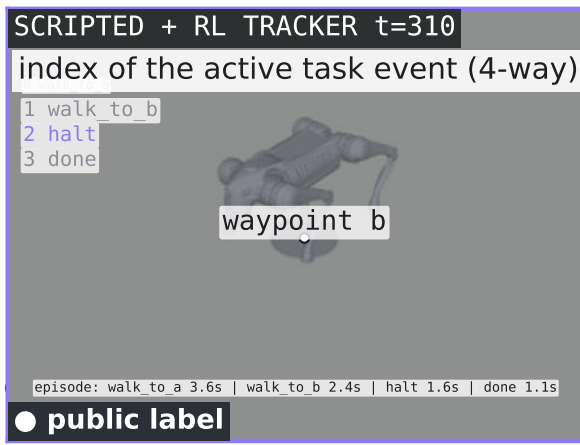

probe.legged.disp
base displacement, next 0.8 s

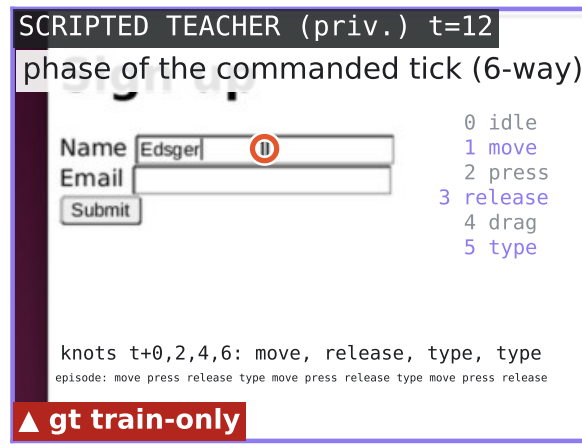

probe.legged.fall
imminent fall

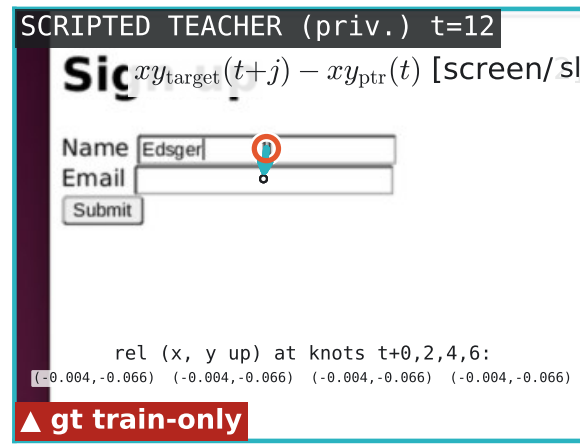

probe.legged.goal
goal in the body yaw frame

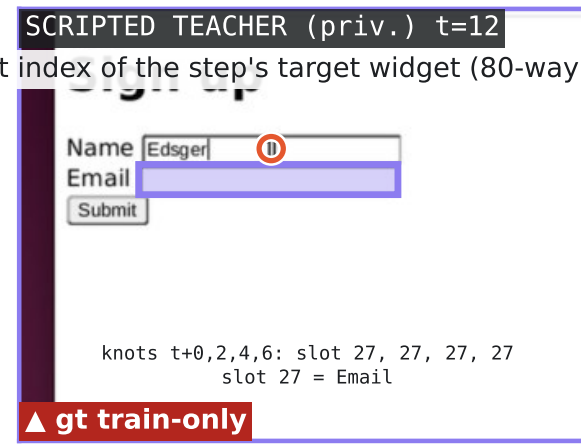

probe.legged.subtask
active task event

probe.pointer.phase
interaction phase per knot

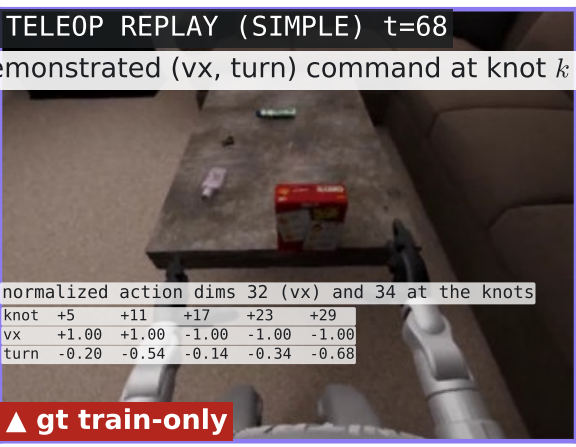

probe.pointer.rel
target relative to pointer

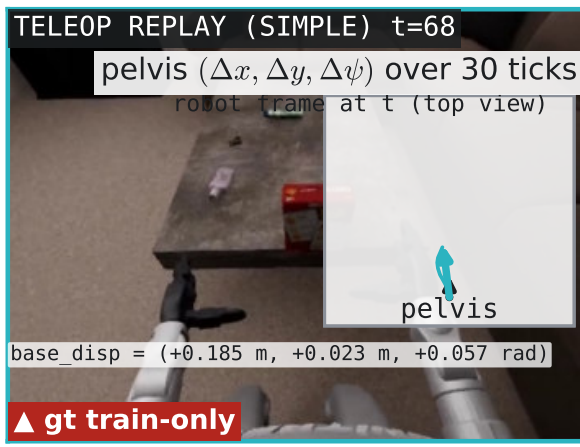

probe.pointer.slot
targeted widget slot

probe.psi0.active_hand
which hand binds the target

probe.psi0.base_cmd
demonstrated base command

probe.psi0.base_disp
pelvis displacement + yaw

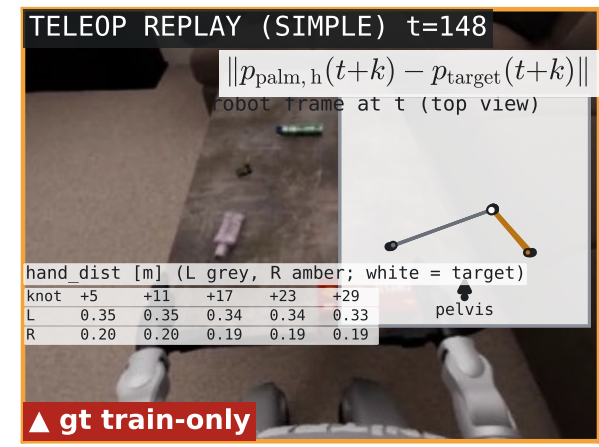

probe.psi0.contact
hand-target contact per knot

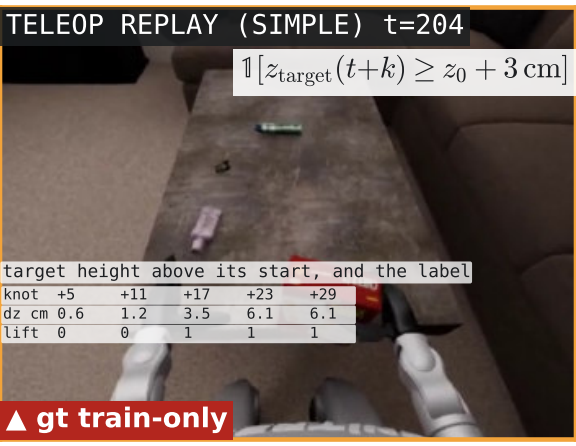

probe.psi0.grasp_face
object face of first contact

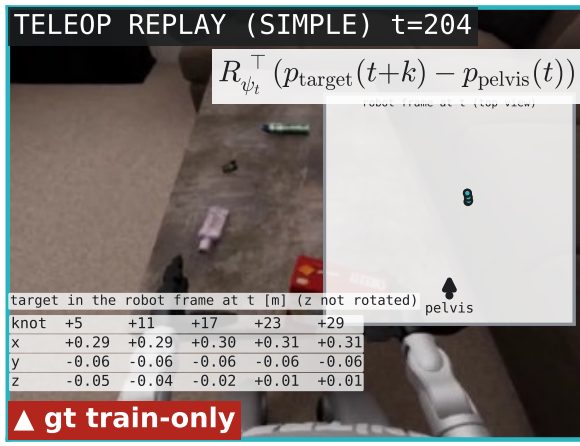

probe.psi0.grasp_pt
first contact point (obj. frame)

probe.psi0.hand_dist
palm-target distance

probe.psi0.lift
target lifted ≥ 3 cm

probe.psi0.target_pos
target position (robot frame)
